

# Making the Business Case for Software Assurance

---

September 26, 2008

Collaborative Innovation Center, Carnegie Mellon University  
Pittsburgh, Pennsylvania

This one-day workshop explored methods for making the business case for software assurance, and associated issues. We particularly focused on ways of capturing development costs and all forms of benefit associated with software assurance and making the case to executive management. The workshop included invited speakers, presentations of refereed papers, and facilitated discussion sessions.

The workshop proceedings are available: PDF document<sup>1</sup>

Other articles about making the business case for software assurance are available in the Business Case content area<sup>2</sup>.
